Kathmandu, Nepal

WORK HISTORY:

AI Fellowship at FuseMachines

April 28, 2025 - December 13, 2025

Took part in the six months long fellowship program that taught different concepts and practical implementations of Machine Learning and AI engineering.

Coding Instructor at Robotech Nepal

April 6, 2025 - December 15, 2025

Taught coding and AI in Python, Scratch and Pictoblox to primary students.

Frontend developer intern at Katmatic Solutions Pvt. Ltd.

July 15, 2025 - November 10, 2025

Worked as an intern in frontend web development using Angular JS.

PROJECTS:

[View works](#)

Plant Disease Detection System

This was a final year project as part of my final year undergraduate degree. In this project me along with my colleagues created a mobile application to predict plant diseases.

Frontend was created in React native expo and the backend in Fast API. We achieved an average accuracy of 95% for three plants.

Convolutional Neural Network

I attempted to implement a CNN from scratch using NumPy in this project.

AI football commentary system

This is an automatic football commentary generation project that I did with my partner as part of my FuseMachines fellowship project where we used object detection, tracking and event recognition along with LLMs to generate commentary for a football match.

Nepali Handwriting Recognition Neural Network

In this project I implemented a neural network for classifying Nepali handwritten digits. The implementation was done from scratch using the numpy library and I was able to achieve 86% accuracy in test dataset.

Multimodal llm

In this project I finetuned LLAMA-3 for automating the customer banking service. I used Flask for serving from the backend. You could either send texts or audio as input and the application would send the response in same format(text for text and audio for audio).

PROJECTS:

Dinosaur Game Automator

This was a simple mini-project where I made an automated bot that was able to play the classic dinosaur game using template matching.

Mero Share filler bot

This was an automation bot where I created an automatic Mero Share filler bot using selenium.

EDUCATION:

B. Sc. CSIT graduate from Amrit Science Campus (cumulative 71.8%).

TECH STACK:

- Experienced in **Python, C, JS**.
- Frameworks like **Flask, FastAPI, Pytorch** and **React**.
- Python libraries like **Pandas, Numpy, Matplotlib**.
- Version control systems like **Git** and **Github**.
- Virtual environments like **Anaconda, UV**.
